Description

Module: Customers Table

Severity: Medium | **Priority:** Medium

Environment: Production / Web Application (Chrome v128, Desktop 1920x1080)

Reporter: Hania Imran

- Pre-conditions:** User is on the Customers module page.
- Steps to Reproduce:**
 - Create a customer entry (e.g., Name: Clara, Amount: \$350).
 - Submit the record.
 - Immediately create a second customer entry using identical field values.
 - Inspect the customer database table.
- Expected Result:** System checks entity uniqueness (via name/email) and prompts a warning dialog (e.g., "There are already records with this name. Do you want to create a duplicate record or continue?").
- Actual Result:** System accepts duplicate inputs and displays identical concurrent rows without warning or validation.
- Impact:** Corrupts data cleanliness and risks inflating financial revenue and customer metrics through duplicate entries.
