Description

Module: Customers
Severity: Medium Priority: Medium
Environment: Production / Web Application (Chrome v128, Desktop 1920x1080)
Pre-conditions: User is logged into Montty Finance and navigated to the Customers module.
Steps to Reproduce: 1. Click Add Entity (Add Customer) on the Customers page. 2. Inspect available form input fields. 3. Enter dummy values (Name, Billing Amount, Date, Payment Type) and click Save. 4. Locate the created record in the table view and click its Edit icon. 5. Inspect the form fields present in the edit view.
Expected Result: The form schema should remain uniform across CRUD operations; fields present during edit should also be available during creation.
Actual Result: Email and Phone Number inputs are omitted from the initial creation form, but rendered when editing.
Impact: Degrades data collection integrity by forcing secondary edit steps to capture complete user profiles.
